Introduction

The goal of this project 0 is to help you set up your python environment and to give you the mechanics of the online grading system.

As a reminder, this course assumes a basic understanding of Python at the level of [6.00 Computer Science and Programming using Python](#) (also on [MIT Open CourseWare](#)). The student is proficient in the following: functions, tuples and lists, mutability, recursion, dictionaries, and file programming.

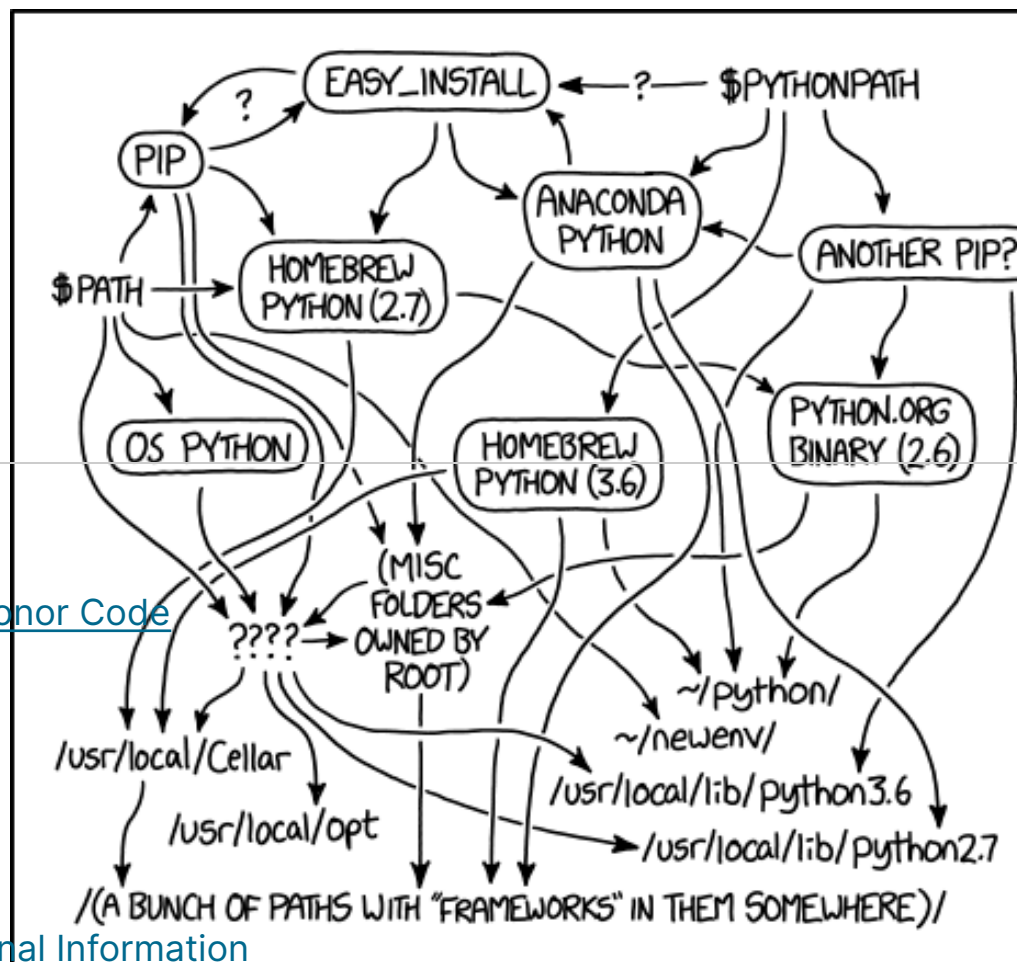

Additionally, we expect you to be able to install the required packages using `pip` and be able to consult the documentation of these packages to find out more about the functions you are not familiar with.
